Hydrotherapy Systems

(01.501.026) • (01.501.038) Alternating Shower

The alternating shower is one of the most popular hydrotherapy devices designed to apply water to the patient's body. The device combines water temperature and pressure to achieve optimum therapeutic effect. The water is delivered via massage hoses and the temperature can be varied either rapidly or gradually according to the specific indications. The massage hoses can be equipped with different nozzles to induce specific physiologic reactions. The water temperature is controlled by a thermostatic valve, while the pressure is adjusted separately for each hose by a pressure valve. The treatment consists of water jets applied to the patient's body from a given distance.

TECHNOMEX

STANDARD EQUIPMENT

- Control panel mounted on desk
- Thermostatic valve
- 3 hoses with exchangeable nozzles
- 3 water pressure regulating valves
- Hand lever for water temperature variation
- 1L. kristalin disinfectant [1] - 19.903.001

OPTIONAL EQUIPMENT

- Pump equalized pressure of water – model T-ALTER/P

STANDARD AVAILABLE COLOURS

-  5005 RAL Signal Blue
-  5012 RAL Light Blue
-  6027 RAL Light Green
-  6018 RAL Yellow Green
-  6002 RAL Leaf Green
-  10217 RAL White
-  9001 RAL Cream
-  3017 RAL Rose
-  2004 RAL Pure Orange

Specify the colour:

- Standard colour is white (10217 RAL).

SPECIFICATIONS

Model of bathtub	Type	Weight (Kg)	External dimensions (mm) (LxWxH)
01.501.026	T-ALTER	25	680 x 410 x 810
01.501.038	T-ALTER/P	45	680 x 410 x 810
